

Cache Server Director

Optimal Cache Management

Cache Server Director (CSD) fully optimizes cache server operations, accelerating content delivery to users and streamlining bandwidth consumption for high performing, cost effective and scalable content services.

Radware's CSD guarantees the fault tolerant operation of cache servers, for uninterrupted content availability, while intelligently managing cached content for increased hit rates, improved responsiveness and reduced bandwidth consumption.

Combining the power of Radware's multi-Gigabit Application Switching with Radware's SynApps Application Aware services including advanced Health Monitoring, Traffic Redirection, Bandwidth Management, Intrusion Prevention and DoS Protection, **CSD maximizes cache server performance for complete content access, fastest delivery speeds and optimal cache utilization.**

Gigabit Speed Cache Operation	Maximum throughput content switching for high performance of cache servers
Fault Tolerant Cache Services	Full availability of cache servers for uninterrupted access to content and media
Content Delivery Acceleration	Redirection of content by server load and actual hit rate, for accelerated content delivery speeds
Targeted Content Hits	Smart caching stores content once, redirecting users to appropriate cache for increased hit effectiveness, highest service responsiveness and reduced bandwidth requirements
Guaranteed Content Delivery Service Levels	Full control over bandwidth allocations for both cachable and non-cachable applications prioritizing traffic to guarantee service levels for mission critical applications while controlling site wide bandwidth consumption
Cache Service Scaling	Load balancing of cache farms for unlimited service growth and cost effective scaling of users and content throughputs
Real-Time Intrusion Prevention and DoS Protection	Multi-Gigabit speed protection of cache servers against debilitating Denial of Service attacks, Trojans and over 1,300 attack signatures, safeguarding the network and resources from hacking and security violations
Content Service Visibility	Configware Insite enables simple CID device configuration and real-time and historical statistics for full monitoring of cache operations and content delivery service performance
1 Unit Rack Size	CSD's compact 1 unit rack size saves you space

Certainty Support

Technical Support Program

All Radware products are supported through the Certainty Support Program consisting of four elements - phone support, software updates, hardware maintenance and on-site support, combined into a single support package.

Security Update Service

Emergency & Weekly Attack Filters

Radware Security Update Service provides automated emergency and weekly Application Attack Filter Updates for subscribers, protecting against over 1,300 known attacks and new application vulnerabilities as they emerge, for immediate and ongoing application defense.
