

LinkProof Always Online

Radware LinkProof manages the operation of all links across multi-homed networks, enabling uninterrupted access to mission critical applications, complete link security and optimized link utilization for reliable and cost effective Gigabit speed connectivity.

LinkProof eliminates link congestion and bottlenecks from enterprise multi-homed networks, for fault tolerant connectivity and continuous availability of online services and distributed IP applications. By intelligently routing traffic and controlling bandwidth service levels and costs across all enterprise links, LinkProof enables effective link utilization, accelerates IP application performance, controls site-wide bandwidth consumption and economically scales operations. Securing against all application and network threats in real-time, LinkProof protects all entry points to your enterprise, continually cleaning links from malicious attacks.

Combining the power of Radware's multi-Gigabit speed Application Switching hardware platform with SynApps Application Aware services, including advanced Health Monitoring, Traffic Redirection, Bandwidth Management, Intrusion Prevention and DoS protection, **LinkProof delivers resilient and economical connectivity keeping your business fully connected.**

Maximum Performance Connectivity	LinkProof Application Switching supports all Internet link capacities from multiple T1s to multi-Gigabit speeds for the highest performing connectivity
Continuous Internet Access	Health Monitoring examines all Internet link operations and Traffic Redirection routes traffic across the highest performing links for uninterrupted Internet access and full service redundancy for multi-homed networks
Accelerated Content Delivery	Optimized content routing delivers the fastest Internet service response time for the best user experience
Guaranteed Connectivity Service Levels	Comprehensive control of bandwidth allocations and full prioritization of traffic by user, application and content to guarantee service levels for mission critical applications
Bandwidth Cost Savings	Policy enforcement of bandwidth by cost, eliminates bursting penalties and streamlines bandwidth usage for cost effective connectivity
Multi-Homing Service Scaling	Full link utilization through load balancing across multi-homed networks for maximum service scaling
Transparent Multi-Homing Management	Complete address scheme handling and automatic traffic routing for seamless management of services across multiple ISPs, eliminating IT management overhead
Gigabit Speed Intrusion Prevention and DoS Protection	Real-time protection of Internet links against debilitating Denial of Service attacks, Buffer Service Overflows and over 1,300 attack signatures, safeguarding the network and resources from hacking and security violations
End-to-End Internet Link Visibility	Configware Insite enables simple device set-up and full link performance information for monitoring site wide connectivity service levels and pinpointing vulnerabilities
1 Unit Rack Size	LinkProof's compact 1 unit rack size saves you space

Certainty Support

Technical Support Program

All Radware products are supported through the Certainty Support Program consisting of four elements - phone support, software updates, hardware maintenance and on-site support, combined into a single support package. Learn more at: www.radware.com/support/

Security Update Service

Emergency & Weekly Attack Filters

Radware Security Update Service provides automated emergency and weekly Application Attack Filter Updates for subscribers, protecting against over 1,300 known attacks and new application vulnerabilities as they emerge, for immediate and ongoing application defense.
